

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application.

1-29. (Cancelled)

30. (Previously Presented) A method of creating a pattern on a body, said method comprising:
arranging a liquid to be between a template and said body;
orientating said template proximate to said liquid; and
applying an electrical field between said template and said body move a portion of said liquid to avoid to spread said liquid over said body to form a film, while preventing discontinuities in said film.

31. (Previously Presented) The method as recited in claim 30 wherein applying further includes applying an electric field of sufficient magnitude to overcome capillary forces of said liquid between said template and said body.

32. (Previously Presented) The method as recited in claim 30 further including providing said template with an electrically conductive layer that is transparent to radiation that causes said liquid material to polymerize and cross-link and, with applying said electric field further including applying a voltage to said conductive layer.

33. (Previously Presented) The method as recited in claim 32 further including forming said template from fused-silica and including an electrically conductive layer that is transparent to radiation that causes said liquid material to polymerize and cross-link and, with applying said electric field further including applying a voltage to said conductive layer.

34. (Previously Presented) The method as recited in claim 33 wherein said radiation includes ultra-violet light.

35. (Previously Presented) The method as recited in claim 32 wherein providing further includes providing said template with a said electrically conductive layer that is contiguous in a region in superimposition with said liquid.

36. (Previously Presented) The method as recited in claim 35 wherein providing further includes providing said template with a plurality of spaced apart electrically conductive layers in a region in superimposition with said liquid.

37. (Previously Presented) The method as recited in claim 35 wherein providing further includes providing said template with a plurality of spaced apart electrically conductive layers in a region in superimposition with said liquid and consecutively applying a voltage to a subset of said plurality of spaced-apart electrically conductive layers.

38. (Previously Presented) The method as recited in claim 35 wherein providing further includes providing said template with a plurality of spaced apart electrically conductive layers and concurrently applying a common voltage level to a subset of said plurality of electrically conductive layers.

39. (Previously Presented) The method as recited in claim 35 wherein providing further includes providing said template with a plurality of spaced apart electrically conductive layers and concurrently applying differing voltage levels to a subset of said plurality of electrically conductive layers.
